

# Where are the Distant Worlds?

The all-sky map represents the night sky as seen from approximately 35° north latitude at the following times:

- 9 p.m. standard time on January 1
- 8 p.m. standard time on January 15
- 7 p.m. standard time on January 31

January

To locate stars in the sky, hold the map above your head and orient it so that one of the four direction labels matches the direction you're facing. The map will then represent what you see in the sky.

Stars visible to the unaided eye known to have planets — listed brightest to dimmest (stars visible this month are circled and numbered on the map)

- |                                     |                        |                           |
|-------------------------------------|------------------------|---------------------------|
| ① – Pollux (Gemini)                 | ⑦ – Upsilon Andromedae | ⑭ – 47 Ursae Majoris      |
| 2 – Fomalhaut<br>(Piscis Austrinus) | ⑧ – 91 Aquarii         | 15 – Rho Coronae Borealis |
| ③ – Gamma Cephei                    | ⑨ – HD 60532 (Puppis)  | ⑯ – 51 Pegasi             |
| ④ – Iota Draconis                   | 10 – Tau Bootis        | ⑰ – HD 89744 (Ursa Major) |
| ⑤ – Epsilon Tauri                   | 11 – Ksi Aquilae       | 18 – Gliese 777a (Cygnus) |
| ⑥ – Epsilon Eridani                 | 12 – 70 Virginis       | ⑱ – HD 38529 (Orion)      |
|                                     | ⑬ – HD 19994 (Cetus)   | ⑳ – 55 Cancri             |
